How to use the VCBF Cherry Location Map

Main selection menu – first screen visible

Map viewing modes:
Search – will be by Cultivar, Neighbourhood or Location
Favourites – the 50 locations selected as festival favourites each year – select the year(s) you want to see on the map
Blooming – shows what should be in bloom for dates selected. Note that these dates are guesses! Click the calendar buttons to select the date range

After making your selection, click the Go button.
You may have to click one of the result lines to see a marker on the map

Selection List

| Cultivar	Neighbou	Location	Blooming
Autumna	Kerrisdal	Yew, 42n	0101-0414
Autumna	Dunbar-S	SW Marin	0101-0426
Autumna	UBC	Chancellc	0101-0426

Results of your selection.

Click a line to see the marker on the map
Mouse over the fields to see the full data in any column
Click a heading to sort the results by that data field

Location marker and pop-up

Tip of the red marker shows at the approximate location of at least one of the trees at the location
Pop-up information
Database ID: useful if you want to inquire about this location

Blooming: approximate start and end of blooming for this year. This information is a guess based on previous blooming dates, where they were available, in a year that had similar weather to what was expected for this year

Description, if entered; not all records have descriptions. Some descriptions include the neighbourhood name, some have clarification of the location or the number of trees to be found at that location

Cultivar: cultivar name

Location: usually the nearest intersection

Photo: where there is a photo, you can click the photo to see it larger. Click outside the photo to close it

X: click this to close this pop-up.

Search menu

Search menu:

Where cultivars are listed, click the box next to the cultivar(s) you want to see on the map, or click All
Neighbourhood: click this word to bring up the list to select by neighbourhood
Address: If you want to find a tree at an address, enter the street name
ByID: if you noted an ID of a location you want to see again, you can enter it here
Go: click this to bring up the records you selected

Add a New Location

You can submit a location to be reviewed for addition to the map. Enter the following:

Neighbourhood: click the drop-down arrow to select the neighbourhood where the tree is, or Other if you do not know

Location: street the tree is on, followed by the cross street or streets

SelectInMap:Tick this to have the Lat (Latitude) and Lon (Longitude) co-ordinates filled in automatically when you click the location on the map. Before ticking the box, navigate to the location and zoom in to at least a 2km square viewable area.

Cultivar: click the drop-down arrow to select the cultivar from the list. Select Other if you do not know the cultivar or it is not on the list

Image Location: if you have a photo posted on the internet somewhere, include a link to the location of the photo – see more details below.

Your name: include in case we would want to contact you for more information

Your Email: include in case we would want to contact you for more information

Description: include information such as side of the street, how many trees, public or private, old or young, date of your photo, blooming date

Submit: click to submit your entry. It will be reviewed for correctness of the cultivar before being added to the map. So you will not be able to confirm the entry right away.

Re: Image Location:

Please link to photos either on the **forums** or on the **vcbf_cherry_scout** flickr account, not to your own photo collections. After you've posted your photo on the forums, you can click the photo, and on a PC, right click and select Link Location. You then paste that

into the Image Location field. It just handles one photo for now. The reason you're taking *Link Location* is that when you click a photo there, it comes up larger, but then you can click that and it brings up just the photo.
